According to our (Global Info Research) latest study, the global MoS₂-based Dry Film Lubricant market size was valued at US\$ 52.8 million in 2024 and is forecast to a readjusted size of USD 69.5 million by 2031 with a CAGR of 4.0% during review period.

In this report, we will assess the current U.S. tariff framework alongside international policy adaptations, analyzing their effects on competitive market structures, regional economic dynamics, and supply chain resilience.

Dry Film Lubricants, also referred to as dry lubes or solid film lubes, provide protection from damage during relative movement and to reduce friction and wear. They have very high lubricating properties allowing applications where one wishes to reduce friction and cannot have wet greases or oils present. Though they may be used as a replacement to greases and oils, they are sometimes used as a “back-up” lubricant, under the grease so that lack of addition of grease will not cause failure. Molybdenum disulfide (MoS₂), is a widely used dry film lubricant. MoS₂ coatings are used in applications where the coefficient of friction, load, and operating temperature may be pushed to the limit. MoS₂ begins to oxidize at 600°F and can be used as a lubricant at temperatures of 400°C (752°F). However, in an oxygen-free environment, the temperature limit for MoS₂ is 1300°F.
