The global Mosfet Output Photorelay market size is expected to reach \$ million by 2029, rising at a market growth of % CAGR during the forecast period (2023-2029).

Mosfet Output Photorelay is a photocoupler that uses a MOSFET (Metal Oxide Semiconductor Field Effect Transistor) as an output switch. It converts the input optical signal into an electrical signal through a photodiode, and then converts the electrical signal into an output current or voltage through a MOSFET, which has the characteristics of high-speed response, low power consumption, high isolation and small size. It is widely used in fields such as automation control, communication equipment and power management.
