## Abstracts

According to our (Global Info Research) latest study, the global Mobile VoIP market size was valued at USD 667630 million in 2023 and is forecast to a readjusted size of USD 1840230 million by 2030 with a CAGR of 15.6% during review period.

Mobile VoIP or simply mVoIP is an extension of mobility to a Voice over IP network. Two types of communication are generally supported: cordless/DECT/PCS protocols for short range or campus communications where all base stations are linked into the same LAN, and wider area communications using 3G/4G protocols.

The deployment of 4G/LTE is one of the key drivers boosting the industry growth. The increase in the capability of wireless bandwidth services and growing investment by telecom operators in the deployment of a high-speed network is expected to enhance the usage of these services over the forecast period. Moreover, mobile VoIP service eliminates the need for voice plans, text add-ons and achieves flexibility in making unlimited, inexpensive or free calls.
