According to our (Global Info Research) latest study, the global Motherboard market size was valued at USD 13670 million in 2023 and is forecast to a readjusted size of USD 15010 million by 2030 with a CAGR of 1.3% during review period.

Motherboard (sometimes alternatively known as the mainboard, system board, baseboard, planar board or logic board, or colloquially, a mobo) is the main printed circuit board (PCB) found in general purpose microcomputers and other expandable systems. It holds and allows communication between many of the crucial electronic components of a system, such as the central processing unit (CPU) and memory, and provides connectors for other peripherals. Unlike a backplane, a motherboard usually contains significant sub-systems such as the central processor, the chipset's input/output and memory controllers, interface connectors, and other components integrated for general-purpose use.

Global Motherboard key players include Asus, Gigabyte Technology, Micro-Star International Co., Ltd, etc. Global top three manufacturers hold a share over 25%.

China is the largest market, with a share over 50%, followed by United States, and Europe, both have a share about 25 percent.

In terms of product, Server Motherboards is the largest segment, with a share about 45%. And in terms of application, the largest application is Commercial, followed by Industrial.
