Abstracts

Motion preservation devices are used to treat disorders associated with the spine. These devices are used to restore and maintain the normal alignment of the spine.

SCOPE OF THE REPORT:

This report focuses on the Motion Preservation Device in global market, especially in North America, Europe and Asia-Pacific, South America, Middle East and Africa. This report categorizes the market based on manufacturers, regions, type and application. Spinal disorders such as spinal stenosis is the most common problem in men and women over 50 years. Aging results in structural changes in the spine such as thickening of the band of the tissue that supports the spine and enlargement of bones & joints, thus leading to spinal impairment.

Asia-Pacific possesses high market potential for motion preservation devices, owing to the rise in incidence of spinal disorders and increase in healthcare expenditure.

Moreover, rapidly aging population, low cost of the spinal procedures in countries such as India as compared to that of developed countries such as the U.S. have fueled the demand for these devices.

The worldwide market for Motion Preservation Device is expected to grow at a CAGR of roughly xx% over the next five years, will reach xx million US\$ in 2023, from xx million US\$ in 2017, according to a new GIR (Global Info Research) study.
