Scope of the Report:

This report focuses on the Motion Preservation in global market, especially in North America, Europe and Asia-Pacific, South America, Middle East and Africa. This report categorizes the market based on manufacturers, regions, type and application.

Titanium is increasingly used as an alternative metal over stainless steel to manufacture cervical spinal implants. Moreover, titanium implants are durable, lightweight, and have minimum interference during computed tomography (CT) and magnetic resonance imaging (MRI) after implantation as compared to stainless steel.

Effective stability facilitation in artificial spine implants is driving the augmented adoption of surface-modified titanium, which is one of the major factors propelling this market's growth prospects.

The worldwide market for Motion Preservation is expected to grow at a CAGR of roughly xx% over the next five years, will reach xx million US\$ in 2023, from xx million US\$ in 2017, according to a new GIR (Global Info Research) study.
