Abstracts

According to our (Global Info Research) latest study, the global Motor Brush Rocker market size was valued at US\$ 473 million in 2025 and is forecast to a readjusted size of US\$ 743 million by 2032 with a CAGR of 6.6% during review period.

In 2025, global production of motor brush rockers reached approximately 164.3 million units, based on an average market price of around US\$ 2.8 per unit. Industry gross profit margins generally ranged from 22% to 38%, reflecting value added from material selection, dimensional precision, and durability under continuous motor operation. Global production capacity in 2025 was estimated at about 205.4 million units, indicating sufficient manufacturing capability to support demand from motor manufacturing and maintenance markets.

Motor brush rockers are mechanical components used in brushed electric motors to support and position carbon brushes against the commutator. They allow controlled brush movement to maintain stable electrical contact, compensating for wear and vibration during motor operation.

The industrial chain includes upstream metal alloys, spring elements, insulating materials, and surface treatment chemicals. The midstream focuses on precision stamping, forming, assembly, and dimensional inspection. Downstream applications mainly involve household appliances, power tools, automotive motors, industrial equipment, and motor repair markets.

The motor brush rocker market is developing steadily as brushed electric motors continue to be widely used in cost-sensitive and high-torque applications. Demand is

driven by household appliances, power tools, and automotive auxiliary motors where brushed designs remain practical and economical. Motor brush rockers play a critical role in ensuring stable electrical contact and extending motor service life. Manufacturers are focusing on improving wear resistance, spring performance, and dimensional consistency to enhance reliability. During 2026-2032, supported by stable demand for brushed motors, replacement needs in aftermarket services, and incremental improvements in motor efficiency, the motor brush rocker market is expected to maintain steady growth across global markets.
