## Abstracts

A motor control center (MCC) is an assembly to control some or all electric motors in a central location. It consists of multiple enclosed sections having a common power bus and with each section containing a combination starter, which in turn consists of motor starter, fuses or circuit breaker, and power disconnect. A motor control center can also include push buttons, indicator lights, variable-frequency drives, programmable logic controllers, and metering equipment. It may be combined with the electrical service entrance for the building.

MCC's are typically found in large commercial or industrial buildings where there are many electric motors that need to be controlled from a central location,[1] such as a mechanical room or electrical room.

According to our (Global Info Research) latest study, the global Motor Control Centers market size was valued at US\$ 15410 million in 2023 and is forecast to a readjusted size of USD 37890 million by 2030 with a CAGR of 13.9% during review period.
