Abstracts

Motor control contactors are electromechanical relays used for switching a large amount of electrical power in industrial motors. The contactors typically protect electric motors from high voltage and current fluctuations and ensure optimal performance in heavy duty industrial applications.

Scope of the Report:

This report focuses on the Motor Control Contactors in global market, especially in North America, Europe and Asia-Pacific, South America, Middle East and Africa. This report categorizes the market based on manufacturers, regions, type and application. Contactors are controlling devices that usually handle the heavy load of an electric motor. They are used for switching loads and are controlled by a circuit of much less power. They vary in size related to the power range dealt by the motor. They have ratings ranging from a breaking current of few amperes to a thousand ampere, depending on the motor that is connected to provide the protection. However, they are used for switching purposes and do not interrupt any short circuits like a circuit breaker.

The worldwide market for Motor Control Contactors is expected to grow at a CAGR of roughly xx% over the next five years, will reach xx million US\$ in 2023, from xx million US\$ in 2017, according to a new GIR (Global Info Research) study.
