## Abstracts

According to our (Global Info Research) latest study, the global Motorcycle Airbag System market size was valued at USD million in 2022 and is forecast to a readjusted size of USD million by 2029 with a CAGR of % during review period. The influence of COVID-19 and the Russia-Ukraine War were considered while estimating market sizes.

A motorcycle airbag system is used in the case of frontal accidents for motorbikes. Motorbikes do not have an enclosed space like cars or trucks for the safety of drivers. Moreover, bikes have very unstable forces and a relatively high torque ratio of engines. Hence, motorbikes are considered relatively risky for riding as compared with trucks, cars, or any other means of transportation. Due to the sturdy designs of bikes, they are more prone to any harm to the vehicle as well as its rider. The motorcycle airbag system consists of electronic control units and modules embedded in the front face of the bike for the effective protection of the rider. Also, some airbags are fitted on the fuel tank and in the inner lining of the rider's jackets.
