The motorcycle bias tubeless tire market refers to the sector involved in the production, distribution, and installation of bias-ply tires specifically designed for motorcycles that can be used without an inner tube. Bias-ply tires are constructed with layers of fabric cords that crisscross at angles to provide strength and durability. Tubeless tires, on the other hand, do not require an inner tube to contain the air pressure.

Bias-ply tires are built with layers of fabric cords that are arranged at an angle, typically between 30 to 45 degrees, from the tire's centerline. This construction gives the tire strength and flexibility. Tubeless technology eliminates the need for an inner tube by incorporating an airtight seal between the tire and the wheel, preventing air leakage.

A Bias tyre is made of layers of rubber-coated, plies of fabric (commonly nylon) placed at angles of approximately 30-40 degrees, with successive plies laid at opposing angles forming a crisscross pattern to which the tread is applied.
