Abstracts

The global Motorcycle Equipment market size is expected to reach \$ 5086 million by 2029, rising at a market growth of 3.8% CAGR during the forecast period (2023-2029).

As the number of accidents continues to rise at an alarming rate, more and more cyclists are becoming cautious. Motorcycle helmet sales have increased as consumers become increasingly willing to invest in their safety. Motorcycles lack the stability of four-wheeled automobiles. Motorcyclists are also much more exposed to the elements and other road hazards than people in enclosed vehicles. There is a strong correlation between the level of safety and precautions taken and the incidence of accidents and fatalities. Therefore, increasing concerns about rider safety has increased spending on protective gear like motorcycle helmets. Increasing disposable income of the urban people, coupled with a desire to travel and live a fulfilled life, has led to an increase in spending on motorcycle protective gear. Nowadays, motorbike riding gears such as helmet, gloves, jackets, knee and elbow guard, spine guard, pant, and footwear are used for protective purposes while riding a bike. Moreover, these protective gears are thicker than conventional clothing with waterproof closures and pockets, zips, higher collars, and are even fitted out with armor.

Motorcycle equipment provides protection and security in an accident or adverse weather conditions. Motorcycle riders face a disproportionately high risk of death, severe injury, and disability due to traffic accidents, particularly those involving the head and neck. Wearing proper motorcycle gear protects riders from head to toe. As people become more aware of the significance of taking precautions to avoid significant injuries, the demand for motorcycle gear and other safety equipment has skyrocketed. Scratches, road burns, and cuts are preventable with suitable clothing. Riding boots shield the legs and feet from harm while out on the trail.
