Abstracts

The global Motorcycle, Scooter and Moped Tires market size is expected to reach $ 17900 million by 2032, rising at a market growth of 4.4% CAGR during the forecast period (2026-2032).

Motorcycle Tires are high-performance pneumatic components specifically engineered for heavyweight and high-speed two-wheeled vehicles. They are characterized by a sophisticated internal structure, often utilizing radial or bias-ply construction with advanced rubber compounds. These tires must provide extreme lean-angle stability, high-speed heat dissipation, and superior longitudinal traction to handle the immense torque and braking forces generated by modern sport, touring, or cruiser motorcycles.

Scooter Tires are designed for vehicles with smaller wheel diameters (typically 10 to 16 inches) and step-through frames. Unlike standard motorcycle tires, they prioritize urban maneuverability, comfort, and longevity. The tread patterns are often optimized for frequent stop-and-go urban environments and wet-surface grip, featuring deeper sipes to effectively evacuate water at moderate speeds.

Moped Tires are lightweight, narrow-profile tires intended for low-speed vehicles with small displacement engines (typically under 50cc) or electric motors. Their construction is simpler and lighter than motorcycle tires, focusing on low rolling resistance to maximize fuel efficiency or battery range. They are built to provide consistent stability and safety within the legal speed limits of the moped category.

In 2025, global Motorcycle, Scooter and Moped Tires production reached approximately 320 Million Units, and Average Price was USD 40 / Unit, with Margin25%.
