Abstracts

A motorcycle stability control system uses multiple sensors to control the driving dynamics of a motorcycle. It uses an inertial measurement unit(IMU)that constantly monitors the motorcycle's accelerations and orientation in three dimensions and measures the lean angle of the motorcycle while turning at corners. The motorcycle stability control system reduces the braking force and increases the tire grip to complete turning at corners.

Scope of the Report:

This report studies the Motorcycle Stability Control market status and outlook of Global and major regions, from angles of players, countries, product types and end industries; this report analyzes the top players in global market, and splits the Motorcycle Stability Control market by product type and applications/end industries.

The motorcycles are comparatively less stable than three-wheelers or four-wheelers, and hence, are prone to more safety and stability issues. This has triggered the need for a device, such as a motorcycle stability control systems, allowing the rider to remain stable during such events. Motorcycle stability control provides stability by controlling brake pressure and improves stability and braking effectiveness in all riding situations. The motorcycle stability control system modulates the rider's control inputs, extending the range of safe operation.

The global Motorcycle Stability Control market is valued at xx million USD in 2017 and is expected to reach xx million USD by the end of 2023, growing at a CAGR of xx% between 2017 and 2023.
