Abstracts

Motorcycle start stop system is an anti-idling technology based on the collaborative combination of brake, battery management and engine. The system efficiently halts the combustion of internal engine whenever the motorcycle comes to a complete halt in a traffic jam or at a signal and restarts the engine the moment motorcycle accelerator is applied. This system helps in reducing unnecessary fuel consumption and idling of motorcycle, which in turn, helps in extending the motorcycle life and its fuel efficiency. Motorcycle start stop system has also proven beneficial in reduction of tailpipe emissions.
