## Abstracts

Motorcycle supercharger is air compressor that increases the air density and the pressure that is supplied to the internal combustion engines. This provides the combustion engine with more oxygen to support and enhance the fuel combustion and increases its output power. In conjunction with high torque and rpm, increased availability owing to established presence of OEMs and aftermarket solutions is projected to propel the industry growth through the forecast period.

### Scope of the Report:

This report focuses on the Motorcycle Supercharger in global market, especially in North America, Europe and Asia-Pacific, South America, Middle East and Africa. This report categorizes the market based on manufacturers, regions, type and application. After the engine manufacture, two wheeler engine power output cannot be enhanced by increasing the engine rpm or displacement. However, by utilizing forced induction through superchargers, a process in which the power output is increased through feeding additional pressurized air into the engine, the performance of the vehicles can be improved. Moreover, the enhanced speed and power leads to sporty driving specifications, which is among the prominent industry growth drivers.

The worldwide market for Motorcycle Supercharger is expected to grow at a CAGR of roughly xx% over the next five years, will reach xx million US\$ in 2023, from xx million US\$ in 2017, according to a new GIR (Global Info Research) study.
