Abstracts

Motorcycle engines are used to power the motorcycles. Two-stroke or four-stroke internal combustion engines (ICE) are used in the motorcycles. The majority of existing motorcycles use internal combustion engines that utilize the energy released by burning fuel to turn a crankshaft. The twin cylinder engine is the most popular type of engine used in motorcycles and automobiles. It consists of two cylinders configured to rotate the crankshaft, and each piston present in the twin cylinder engine revolves the crankshaft at an angle of 360°.

Scope of the Report:

This report focuses on the Motorcycle Twin Cylinder Engine in global market, especially in North America, Europe and Asia-Pacific, South America, Middle East and Africa. This report categorizes the market based on manufacturers, regions, type and application. The rising requirement for the V-twin engines is mainly due to the fulfilment of the necessities of strict exhaust emissions, high efficiency, and availability of low and medium power ranges. Also, the huge demand for the engine has raised the overall market share of Harley-Davidson that mainly uses this air-cooled V-twin engine. Further, the increased durability and reliability offered by the V-twin engines will drive the market growth during the forecast period. This will also drive the growth of the V-twin engine market.

The worldwide market for Motorcycle Twin Cylinder Engine is expected to grow at a CAGR of roughly xx% over the next five years, will reach xx million US\$ in 2023, from xx million US\$ in 2017, according to a new GIR (Global Info Research) study.
