According to our (Global Info Research) latest study, the global Motorized Flow Table market size was valued at USD million in 2022 and is forecast to a readjusted size of USD million by 2029 with a CAGR of % during review period.

Motorized flow table is a device used to measure the flow characteristics and workability of concrete or cementitious materials. It consists of a flat circular table that is rotated by a motor. A mixture of concrete or cement paste is placed on the table, and the motor rotates it at a constant speed. The flow of the material is then observed, and the diameter of the spread is measured, which indicates the flowability and consistency of the concrete. It helps in assessing the quality and suitability of concrete mixes for various construction applications.
