## Abstracts

The global Motorized Flow Table market size is expected to reach \$ million by 2029, rising at a market growth of % CAGR during the forecast period (2023-2029).

Motorized flow table is a device used to measure the flow characteristics and workability of concrete or cementitious materials. It consists of a flat circular table that is rotated by a motor. A mixture of concrete or cement paste is placed on the table, and the motor rotates it at a constant speed. The flow of the material is then observed, and the diameter of the spread is measured, which indicates the flowability and consistency of the concrete. It helps in assessing the quality and suitability of concrete mixes for various construction applications.
