Mould resistant and waterproof paint is a type of coating that combines two important functions: preventing the growth of mould and repelling water. This type of paint usually contains fungicides or biocides. These substances inhibit the growth of mould, mildew, and other fungi. Common fungicides used in these paints include zinc pyrithione and carbendazim. The presence of these agents creates an environment that is unfavourable for mould spores to germinate and grow. For example, in a damp bathroom, where mould is likely to form due to high humidity, mould - resistant paint can prevent the appearance of black or green mould patches on the walls.
