Abstracts

According to our (Global Info Research) latest study, the global Mould Temperature Controller (MTC) for Die Casting Machine market size was valued at US\$ 183 million in 2024 and is forecast to a readjusted size of USD 248 million by 2031 with a CAGR of 4.5% during review period.

In this report, we will assess the current U.S. tariff framework alongside international policy adaptations, analyzing their effects on competitive market structures, regional economic dynamics, and supply chain resilience.

Mould temperature controller (MTC) directly affects the solidification process of molten metal and casting quality by precisely controlling the mold temperature in die casting. Temperature stability control: Dynamic balance of mold temperature is achieved through a closed-loop control system to reduce casting defects (such as shrinkage and cracks) caused by temperature fluctuations. Cooling rate optimization: For different metal alloys (such as aluminum alloys and magnesium alloys), the cooling rate is adjusted to control the degree of grain refinement, thereby improving the mechanical properties of castings. Process adaptability: In low-pressure casting, leakage compensation technology is used to ensure the repeatability of liquid surface pressurization, improve production efficiency and process stability.

Die-casting machines are developing towards large-scale, automated and modularization. The main downstreams of die-casting machines include automobiles and motorcycles, home appliances, 3C industry, electromechanical and tools, building materials and others, among which automobiles and motorcycles are the main downstreams. The trend of lightweight automobiles is obvious, which will further

increase the demand for die-casting machines. It is estimated that the Asia-Pacific region will have a significant share in the global cold chamber die-casting machine market. Emerging economies, such as China and India, are expected to achieve significant growth in automobile and other manufacturing industries. Therefore, this is expected to significantly drive the demand for die-casting machines in the region.
