According to our (Global Info Research) latest study, the global Mountain Bike Disc Brake market size was valued at USD million in 2023 and is forecast to a readjusted size of USD million by 2030 with a CAGR of % during review period.

Disc brakes are a powerful and progressive braking mechanism; a hydraulic or cable actuated caliper forces the disc brake pads onto a rotor to slow down or stop your bike. The vast majority of disc brakes on mountain bikes are hydraulically activated; brake fluid drives pressure to the caliper and this results in a clamping force on your rotor via the brake pads. The physical act of braking is caused by the friction generated by the brake pads and the rotors. Hydraulic disc brakes are lighter, more reliable, feel better and are more powerful than cable actuated disc brakes. Cable discs however are cheaper and if you already have a bike with cable rim brakes, you don't need to buy new brake levers as a cable disc brake will use conventional-style cable pull brakes
