Abstracts

The global Mountain Bike Rental market size is expected to reach \$ 345 million by 2032, rising at a market growth of 6.3% CAGR during the forecast period (2026-2032).

Mountain bike rental refers to the rental service of mountain bikes (including hardtail/full suspension/e-MTB, etc.) that is charged by the hour/day/week for tourists, cycling enthusiasts or local commuters/leisure people. It usually includes vehicle delivery/pickup and return, basic adjustment, helmet and protective gear selection, route suggestions, rescue or repair support, and can be linked with scenic spots, cycling parks, hotels/travel agencies, events, etc.

The mountain bike rental market is exhibiting four core trends: electrification penetration, digital operation, diversified scenarios, and sustainable upgrades. These trends are driving the industry's transformation from traditional offline rentals to end-to-end intelligent services, covering all scenarios including professional cycling, leisure tourism, and urban commuting. Simultaneously, service models and ecosystem collaboration are continuously innovating to adapt to broader user needs and market environments.

The rise of the outdoor economy and micro-vacations, the demand for lightweight experiences driven by consumption upgrades, technological iterations reducing operating costs, and policy support for cycling infrastructure construction are all contributing factors. However, seasonal demand fluctuations, high vehicle maintenance costs, regional regulatory differences, and intensified market competition leading to homogenization necessitate breakthroughs through refined operations and differentiated services.

This report studies the global Mountain Bike Rental demand, key companies, and key regions.
