It typically uses counterbalanced cars or dual-car systems running in opposite directions to improve energy efficiency. It is widely used in mountain tourism areas, urban hillside transport, and short-distance passenger mobility in challenging terrains.

At the same time, the system is evolving toward higher safety standards, intelligent control systems, and landscape-integrated design, making it an important infrastructure for combining low-carbon transportation with tourism experiences. Modern mountain funicular systems are also improving energy efficiency, automation, and remote monitoring capabilities to handle higher passenger volumes and more complex terrain conditions.
