According to our (Global Info Research) latest study, the global Mouse Monoclonal Antibody Production Service market size was valued at US\$ 627 million in 2024 and is forecast to a readjusted size of USD 870 million by 2031 with a CAGR of 4.8% during review period.

Mouse monoclonal antibody production service is a specialized offering provided by biotech companies or research institutions. It involves a series of complex biological processes where a specific antigen is introduced into a mouse, triggering its immune system to produce antibodies. Splenocytes from the immunized mouse are then fused with myeloma cells to create hybridoma cells. These hybridomas are screened and cloned to isolate those that produce the desired monoclonal antibody, which is highly specific to the target antigen. The service provider then scales up the production of this monoclonal antibody, purifies it to a high degree, and delivers it to clients, who can be researchers for use in experiments, or pharmaceutical companies for drug development and diagnostic applications.
