According to our (Global Info Research) latest study, the global Mouse Wheel Encoders market size was valued at US\$ million in 2025 and is forecast to a readjusted size of US\$ million by 2032 with a CAGR of %during review period.

The mouse wheel encoder is the core component of the mouse. Its working principle is that the scroll wheel drives the turntable in the encoder to rotate. The turntable contacts are in fixed electrical contact with the base to generate on-off signals. Therefore, it has the characteristics of good scale feel and accurate positioning. Mouse wheel encoders can be divided into two types: grating encoders and mechanical encoders. Mechanical encoders are the mainstream products in the current market. As global computer shipments increase, the mouse wheel encoder market will further expand and upgrade towards long life and high performance.
