Abstracts

The global MPO Backbone Fiber Jumper market size is expected to reach \$ 3575 million by 2032, rising at a market growth of 8.5% CAGR during the forecast period (2026-2032).

MPO Backbone Fiber Jumper refers to a high-density multi-core fiber optic trunk component used for data center backbone links. It usually uses MPO multi-core connectors and multi-core optical cables with 12 cores, 24 cores, 48 cores or even higher cores as the backbone transmission medium. Its main function is to achieve high-capacity parallel optical signal transmission between switches and distribution frames at the main trunk layer of the machine, supporting high-speed and high-density cabling architectures. In 2025, the global sales volume will be about 63 million kilometers per core kilometer, with an average unit price of about 31.5 US dollars per kilometer, a capacity utilization rate of about 82%, and a gross profit margin of about 30%. Its upstream mainly includes fiber preform and fiber optic cable manufacturing enterprises MPO connectors, precision ceramic inserts and metal structural parts suppliers. The midstream is a manufacturer of optical communication cable components and data center cabling solutions. The downstream is concentrated in the very large data center, cloud computing platform, Internet data center operators, telecommunications backbone network operators and communication equipment system integrators. In the product cost structure, optical fiber and MPO connector materials account for about 58%, processing and manufacturing costs and labor costs account for about 18%, equipment depreciation and energy consumption account for about 10%, testing, calibration and yield loss account for about 6%, packaging, logistics and management costs account for about 8%. The downstream demand list mainly includes the expansion of the very large data center AI computing center construction, cloud computing infrastructure upgrading, 5G and 5G evolving bearer networks, enterprise level data center transformation. The

list of downstream customers includes cloud service providers, telecom operators, Internet platform companies, data center construction and operation and maintenance providers, and communication equipment manufacturers. The policy drive for business opportunities comes from the digital economy, the continuous promotion of eastern and western computing and computing network construction, which drives the intensive construction of infrastructure. The technological innovation drive comes from the demand for high-density backbone links from the development of 800G and above high-speed optical modules, 1.6T optical interconnection, and the improvement of silicon optical and co packaging optical technology. The change in consumption demands is reflected in the demand for higher bandwidth, lower latency, and stronger wiring scalability brought about by the improvement of computing density, which promotes MPO The backbone fiber jumpers are continuously upgrading towards higher core count, higher reliability, and modular rapid deployment.
