Abstracts

MPO loopback module, also known as MPO/MTP® looper or loopback optical module, is a device used for signal return in test systems or network systems.

The MPO loopback module contains an MPO loopback jumper, which threads both ends of the optical fiber into an MTP/MPO connector, allowing the optical path to return to itself within the same connector without changing the signal or repeating the signal. In this way, the actual path of a signal through the network can be simulated, allowing detection of potential problems in the link.

According to our (Global Info Research) latest study, the global MPO Loopback Module market size was valued at US$ million in 2023 and is forecast to a readjusted size of USD million by 2030 with a CAGR of %during review period.
