Abstracts

According to our (Global Info Research) latest study, the global MPP Pipe market size was valued at US\$ 704 million in 2025 and is forecast to a readjusted size of US\$ 987 million by 2032 with a CAGR of 5.4% during review period.

In 2025, global sales of MPP Pipe reached approximately 0.57 million tons, with an average market price of about USD 1200 per ton, an annual production capacity of roughly 0.65 million tons, and an industry-average gross margin of approximately 15%.

MPP pipe generally refers to Modified Polypropylene Pipe, mainly used as a power cable protection conduit/sheath pipe. It is made from modified polypropylene through dedicated formulation and extrusion processing. Public product literature commonly positions it as a conduit for power and communication cables, especially in trenchless installation projects across roads, railways, and riverbeds where open excavation is undesirable.

The upstream side of MPP pipe is centered on PP resin / modified polypropylene compound, combined with additives, color masterbatch, and formulation materials that improve heat resistance, pressure resistance, insulation, and impact strength. The midstream covers material modification, compounding, extrusion, sizing/cooling, cutting, socket/interface processing, testing, and project-oriented distribution; Downstream demand mainly comes from State Grid / Southern Grid supporting projects, municipal power conduit works, telecom cable protection, rail transit, road reconstruction, industrial parks, and renewable-energy supporting cable corridors. In supply-chain terms, the typical flow is petrochemical / PP suppliers ? modified-material and pipe manufacturers ? EPC contractors, power construction firms, and municipal project owners, with demand closely linked to distribution-grid upgrades, underground utility

corridors, cable undergrounding, and the penetration of trenchless construction.
