Abstracts

The global MPP Power Cable Protection Pipe market size is expected to reach \$ 987 million by 2032, rising at a market growth of 5.4% CAGR during the forecast period (2026-2032).

In 2025, global sales of MPP Power Cable Protection Pipe reached approximately 0.57 million tons, with an average market price of about USD 1200 per ton, an annual production capacity of roughly 0.65 million tons, and an industry-average gross margin of approximately 15%.

MPP Power Cable Protection Pipe generally refers to Modified Polypropylene Pipe, mainly used as a power cable protection conduit/sheath pipe. It is made from modified polypropylene through dedicated formulation and extrusion processing. Public product literature commonly positions it as a conduit for power and communication cables, especially in trenchless installation projects across roads, railways, and riverbeds where open excavation is undesirable.

The upstream side of MPP Power Cable Protection Pipe is centered on PP resin / modified polypropylene compound, combined with additives, color masterbatch, and formulation materials that improve heat resistance, pressure resistance, insulation, and impact strength. The midstream covers material modification, compounding, extrusion, sizing/cooling, cutting, socket/interface processing, testing, and project-oriented distribution; Downstream demand mainly comes from State Grid / Southern Grid supporting projects, municipal power conduit works, telecom cable protection, rail transit, road reconstruction, industrial parks, and renewable-energy supporting cable corridors. In supply-chain terms, the typical flow is petrochemical / PP suppliers ? modified-material and pipe manufacturers ? EPC contractors, power construction firms,

and municipal project owners, with demand closely linked to distribution-grid upgrades, underground utility corridors, cable undergrounding, and the penetration of trenchless construction.
