The global MPPT Solar Controller market size is expected to reach \$ million by 2029, rising at a market growth of % CAGR during the forecast period (2023-2029).

The full name of MPPT is maximum power point tracking, MPPT solar controller is a DC to DC converter for solar power generation system. It receives the voltage from the solar panel and converts it to a more suitable level to charge the battery. The generated voltage of the solar panel can be detected in real time, and the highest voltage and current value (VI) can be tracked, so that the system can charge the battery with the maximum power output. It is used in solar photovoltaic systems to coordinate the work of solar panels, batteries and loads, and is the brain of the photovoltaic system.
