According to our (Global Info Research) latest study, the global MR Fluid (MRF) market size was valued at USD 70 million in 2023 and is forecast to a readjusted size of USD 131 million by 2030 with a CAGR of 9.4% during review period.

Magnetorheological (MR) fluids are a class of smart materials whose yield stress increases considerably in the presence of externally applied magnetic field. MR Fluids consist of magnetic (typically iron) particles in a carrier fluid. In the presence of a magnetic field, the micron-sized particles link and change the fluid to a semi-solid in milliseconds. When the magnetic field is removed, the fluid just as quickly reverts back to its natural free-flowing state. Furthermore, the degree to which the fluid changes to a semi-solid is proportional to the strength of the magnetic field, giving the fluid infinite controllability and precision.

Global key players of MR fluid (MRF) include Lord Corporation, QED Technologies International, Liquids Research Limited, Arus MR Tech, CK Materials Lab, etc. Global top five manufacturers hold a share over 95%.
