## Abstracts

According to our (Global Info Research) latest study, the global MRI-compatible Laryngoscope market size was valued at US\$ 44.45 million in 2025 and is forecast to a readjusted size of US\$ 75.87 million by 2032 with a CAGR of 7.9% during review period.

In 2025, global sales of MRI-compatible laryngoscopes reached 36,000 units, with an average selling price of \$1,200 per unit. An MRI-compatible laryngoscope is a medical device specifically designed for airway management and intubation procedures in MRI environments. It utilizes non-magnetic materials and is electromagnetically compatible, allowing for safe use even in strong magnetic fields, avoiding interference with image quality and equipment operation. Common forms include combinations of video laryngoscopes and disposable laryngoscope blades. These devices are lightweight, interference-resistant, and offer high visualization capabilities, and are widely used in MRI examination rooms, emergency anesthesia, and intensive care settings. The product structure typically includes a non-magnetic laryngoscope body, optical imaging module, handpiece, power supply assembly, and disposable laryngoscope blade. The upstream raw materials for MRI lenses mainly involve medical-grade polymer materials, titanium alloys or engineering plastics, miniature cameras and electronic components. Downstream suppliers cover hospital radiology departments, anesthesiology departments, emergency centers and medical equipment integrators. Future development focuses on high-definition digital imaging, disposable consumables and intelligent assisted airway management. The global total production capacity is about 48,000 sets/year, and the industry average gross profit margin is about 38%-48%. Demand and business opportunity analysis shows that with the increase in MRI examination volume, the demand for non-magnetic environment medical equipment,

and the standardization of emergency airway management, MRI-compatible laryngoscopes have stable growth potential and technological upgrade space in the field of high-end medical devices.
