Abstracts

According to our (Global Info Research) latest study, the global MRI Guided Drug Delivery market size was valued at US\$ 116 million in 2024 and is forecast to a readjusted size of USD 225 million by 2031 with a CAGR of 10.0% during review period.

MRI guided drug delivery or magnetic resonance guided drug delivery is a part of an advanced drug delivery system that helps transport a therapeutic agent from the site of administration to the targeted area. High intensity focused ultrasound (HIFU) is a non-invasive and non-ionizing sonic energy-based therapeutic technology for inducing thermal and non-thermal effects in tissues. Depending on the parameters, HIFU can ablate tissues by heating them to >55 °C to induce denaturation and coagulative necrosis, improve radio- and chemo-sensitizations and local drug delivery from nanoparticles at moderate hyperthermia (?41-43 °C), and mechanically fragment cells using acoustic cavitation (also known as histotripsy). HIFU has already emerged as an attractive modality for treating human & veterinary cancers, infectious diseases, and neuromodulation.

The core global MRI Guided Drug Delivery manufacturers include Chongqing Haifu Medical Technology, Monteris and Medtronic. The top three companies have a market share of about 43%. North America is the world's largest MRI Guided Drug Delivery market with a market share of approximately 57%, followed by China and Europe with a market share of 35% and 4%, respectively. In terms of product type, MRgFUS Non-Invasive Device is the largest segment with approximately 79% market share. In terms of application, Hospitals is the largest downstream segment, accounting for approximately 89% of the market share.
