According to our (Global Info Research) latest study, the global MRI-Guided Radiation Therapy System market size was valued at US\$ 108 million in 2024 and is forecast to a readjusted size of USD 191 million by 2031 with a CAGR of 8.5% during review period.

In this report, we will assess the current U.S. tariff framework alongside international policy adaptations, analyzing their effects on competitive market structures, regional economic dynamics, and supply chain resilience.

The MRI-Guided Radiation Therapy System is an innovative tumor radiotherapy device that highly integrates magnetic resonance imaging (MRI) technology with a medical linear accelerator. It takes advantage of MRI's non-radioactivity and high soft tissue contrast resolution to obtain real-time high-resolution images of the patient's tumor and surrounding normal tissue during treatment. It uses online adaptive technology to automatically adjust the target position, shape and irradiation dose according to the dynamic changes in tumor morphology, size and position, achieving millimeter-level precision in soft tissue resolution and real-time tumor tracking, while ensuring that high-dose radiation accurately covers the tumor area while maximally protecting normal tissue. Its technological breakthrough solves the limitations of traditional CT image-guided radiotherapy, such as unclear soft tissue display and inability to track tumor displacement in real time, and provides more personalized and precise treatment plans for complex cases such as prostate cancer, rectal cancer, and brain metastases.
