Abstracts

According to our (Global Info Research) latest study, the global MRI Metal Detector market size was valued at US\$ 526 million in 2024 and is forecast to a readjusted size of USD 2733 million by 2031 with a CAGR of 26.9% during review period.

MRI Metal Detector refer to the Ferromagnetic Detection Systems for entry to MRI room. Audio and Visual alarm indication are integral with sensor array. Ferromagnetic objects taken through the MRI door into Zone 4 can lead to serious injury, time consuming delays, or costly damage to the valuable imaging system. When ferrous objects reach the MRI magnet's fringe field, they can be strongly attracted, at high speed, towards the magnet's core. This frightening and dangerous phenomenon is known as the projectile effect.

MRI Metal Detector gives radiologists and patients opportunity to make sure they are free of any metallic objects. While conventional metal detectors have been used to help identify metal objects in and on patients, but they are not 100 percent accurate and can give false-positives and false-negatives. Recent study shows that professional ferromagnetic detectors have 99 percent sensitivity.

At present, the major manufacturers of MRI Metal Detectors are CEIA USA, ETS Lindgren, Fujidenolo, ITTEL Telecomunicazioni, Kopp Development, Metrasens and Biodexs. They composed of the majority market share about 90%.

North America takes the biggest market share of 77%, followed by Europe with 12%.
