Abstracts

Magnetic resonance imaging (MRI) is a medical imaging technique used in radiology to form pictures of the anatomy and the physiological processes of the body in both health and disease.

Scope of the Report:

This report focuses on the MRI Systems in global market, especially in North America, Europe and Asia-Pacific, South America, Middle East and Africa. This report categorizes the market based on manufacturers, regions, type and application. Though used primarily in diagnosing disorders in the central nervous system in radiosurgery for the treatment of intracranial tumors and arteriovenous malformations, MRI imaging techniques are now also being used for the diagnosis of cardiac and breast diseases. This led to the development of MRI-compatible pacemakers that offer increased patient safety and procedure accuracy in patient screening, which will in turn, fuel the growth of the MRI systems market.

The worldwide market for MRI Systems is expected to grow at a CAGR of roughly xx% over the next five years, will reach xx million US\$ in 2023, from xx million US\$ in 2017, according to a new GIR (Global Info Research) study.
