Abstracts

According to our (Global Info Research) latest study, the global MRO Consumables market size was valued at US\$ 160722 million in 2025 and is forecast to a readjusted size of US\$ 198140 million by 2032 with a CAGR of 3.1% during review period.

MRO consumables are industrial supplies that are regularly used up during the maintenance, repair, and daily operation of equipment and facilities but do not become part of the final product. They typically include lubricants, seals, fasteners, adhesives, cleaning chemicals, and personal protective equipment (PPE). Although individual items are low in unit value, MRO consumables are critical to operational continuity, as insufficient supply can lead to unplanned downtime. Their demand is characterized by high replacement frequency, standardized specifications, and strong emphasis on reliability, consistency, and stable supply rather than price alone.

Demand is primarily driven by rising reliability and compliance pressures in asset-intensive operations: organizations aim to reduce unplanned downtime by strengthening preventive maintenance and standardizing shopfloor practices, which sustains recurring consumption of lubricants, filtration items, fastening/sealing aids, repair/welding consumables, abrasives/cutting consumables, and PPE. In parallel, tighter EHS and audit requirements make safety and contamination-control consumables more non-discretionary, while digitized asset management and indirect procurement processes turn fragmented, high-turnover consumable buying into a more routine and scaled activity.
