## Abstracts

The global MTB Slick Tyre market size is expected to reach \$ 192 million by 2032, rising at a market growth of 6.8% CAGR during the forecast period (2026-2032). In 2025, global MTB Slick Tyre approximately 1698 k units, with an average global market price of around US\$ 64 per unit. Gross margin is about 43%. The cost is 36 usd. Production Capacity is about 2500 units. MTB Slick Tyre is a smooth-tread bicycle tyre designed for mountain bikes used primarily on paved roads, urban surfaces, or hard-packed terrain, prioritizing low rolling resistance, quiet operation, and improved speed efficiency over off-road traction. Upstream, it depends on rubber compounds, casing fabrics, bead materials, and tyre design and manufacturing technologies tailored for durability and road performance; downstream, MTB slick tyres are mainly used by urban commuters, fitness riders, touring cyclists, and riders converting mountain bikes for city or mixed-use riding, where efficiency, comfort, and reduced wear are more important than off-road grip.

### Urban and Commuter-Oriented Growth

As more riders use mountain bikes for city commuting and fitness riding, demand for MTB slick tyres optimized for urban roads and mixed surfaces will continue to grow.

### Lower Rolling Resistance and Higher Efficiency

Tyre designs will focus on smoother tread profiles and optimized rubber compounds to further reduce rolling resistance and improve speed and energy efficiency on paved surfaces.

### Improved Durability and Puncture Protection

Enhanced casing structures and puncture-resistant layers will be increasingly adopted to address common urban hazards such as glass, debris, and rough road conditions.

### Tubeless and Low-Pressure Compatibility

MTB slick tyres are expected to increasingly support tubeless-ready designs, enabling lower pressure operation, improved comfort, and reduced risk of pinch flats.

### Lightweight and Sustainable Materials

Manufacturers will incorporate lighter materials and more sustainable rubber compounds and production processes to improve ride quality while reducing environmental impact.
