Abstracts

According to our (Global Info Research) latest study, the global Mud Lipsticks market size was valued at US\$ million in 2025 and is forecast to a readjusted size of US\$ million by 2032 with a CAGR of %during review period.

Lip mud, as the name suggests, is a lip makeup product with a mud texture. From the appearance, most of the lip muds on the market are similar to lip glazes, and are applied with a lip brush. However, the difference from lip glaze is that it has a distinct granular texture and a drier texture; from the makeup effect point of view, after applying on the lips, it will present a matte soft mist makeup effect, with strong concealing power, making it easier to create the plump lip effect pursued by European and American lip makeup.
