According to our (Global Info Research) latest study, the global Molybdenum market size was valued at USD 292320 million in 2023 and is forecast to a readjusted size of USD 328350 million by 2030 with a CAGR of 1.7% during review period.

Molybdenum is a chemical element with symbol Mo and atomic number 42. The name is from Neo-Latin molybdaenum, from Ancient Greek, meaning lead, since its ores were confused with lead ores.

Molybdenum does not occur naturally as a free metal on Earth; it is found only in various oxidation states in minerals. The free element, a silvery metal with a gray cast, has the sixth-highest melting point of any element. It readily forms hard, stable carbides in alloys, and for this reason most of world production of the element (about 80%) is used in steel alloys, including high-strength alloys and superalloys.

The Global Info Research report includes an overview of the development of the Molybdenum industry chain, the market status of Molybdenum Products (Molybdenum Mines, Molybdenum Powder), Alloys Products (Molybdenum Mines, Molybdenum Powder), and key enterprises in developed and developing market, and analysed the cutting-edge technology, patent, hot applications and market trends of Molybdenum.
