Abstracts

The global Muhuhu Oil market size is expected to reach \$ 498 million by 2032, rising at a market growth of 5.4% CAGR during the forecast period (2026-2032).

Global sales of Muhuhu oil reached 2,605 tons in 2025, with an average price of US\$125,262 per ton.

Muhuhu (AKA African Sandalwood) oil is extracted from the wood of the Muhuhu tree that is Native to Kenya, Tanzania, and the African Coast.

Muhuhu (African sandalwood) oil is made from the heartwood of *Brachylaena hutchinsii* (= *B. huillensis*) and furniture factory scraps/sawdust. The main harvest season is from May to August, with trees collected by hand from local communities. Trees must be naturally dead or harvested only after government restrictions on logging. The raw materials are distilled on-site within a 50 km radius to ensure freshness. The dried wood has an oil content of 2.5-3.5%, requiring 30-40 kg of dried wood to produce 1 kg of essential oil. Based on the 2024 farmgate price of USD 0.35-0.40/kg dried wood, raw material costs account for approximately 30% of the ex-factory price. Adding the energy consumption of 6-8 hours of distillation in a coal-fired boiler and labor costs, the total processing cost is approximately USD 55-60/kg. Upgrading to organic wild certification requires additional third-party audits and batch traceability, raising the total cost to USD 70-75/kg, corresponding to a wholesale price of USD 90-110/kg.

This report studies the global Muhuhu Oil production, demand, key manufacturers, and key regions.
