Multi-articulating Meoelectric Hand is an externally powered prosthesis directly controlled by brain nerves, that is, it uses brain-computer interface technology. It is a product of modern high science and technology such as precision machinery, microelectronics technology, material science, and physiological medicine. It has good bionic effects and is the development direction of modern prostheses. The control system of this prosthesis is that the brain nerves control the limb muscles to contract and produce movement, and the myoelectric signal is transmitted to the skin surface. After receiving the signal, the control system drives the micro motor to produce movement.
