The global Multi-axis CNC Punching Machine market size is expected to reach \$ million by 2029, rising at a market growth of % CAGR during the forecast period (2023-2029).

A multi-axis CNC punch is a machine used to perform punching operations on materials. It can achieve perforation in different directions and angles by controlling the movement of multiple axes, thereby meeting the perforation needs of different shapes and sizes. Multi-axis CNC punching machines usually consist of a control system, multiple motion axes and a punching tool. Through preset programs and parameters, the position, depth and shape of the perforation can be precisely controlled, making it suitable for various application fields, such as metal processing, woodworking, plastic processing, etc.
