## Abstracts

The ongoing developments in the architecture of industrial machinery have enhanced accuracy and performance for repeatable tasks. This, in turn, has created a huge room for devices that can integrate with traditional axis positioning. The digital motion controller is one such device that acts as a modern solution for axis control in machines and systems. They can be PC programmed with the help of software to manage position, velocity, or force of any electrohydraulic axis to improve motion performance and simplify automation architecture, and can be interfaced with fieldbus, the machine main control unit.

### Scope of the Report:

This report focuses on the Multi-axis Motion Controller in global market, especially in North America, Europe and Asia-Pacific, South America, Middle East and Africa. This report categorizes the market based on manufacturers, regions, type and application. CNC machines are used in most industrial applications for better process accuracy and productivity. The spindle positions of these machines are controlled by motion controllers. The precise movement control of CNC machines from light-duty to heavy-duty applications is assisted by the effective deployment of motion control systems. The accurate movements of the machine assist in locating the machining area and assist in determining the quality of products being developed.

Moreover, the effective deployment of motion control system also ensures fast, smooth, and vibration-less movement of machine operations. The utilization of the motion control systems in CNC machines will increase the adoption of these machines for industrial applications, which is likely to create a favorable market for multi-axis motion controller market in the coming years.

The worldwide market for Multi-axis Motion Controller is expected to grow at a CAGR of roughly xx% over the next five years, will reach xx million US\$ in 2023, from xx million US\$ in 2017, according to a new GIR (Global Info Research) study.
