According to our (Global Info Research) latest study, the global Multi-band Booster market size was valued at US\$ million in 2024 and is forecast to a readjusted size of USD million by 2031 with a CAGR of %during review period.

Multi-band booster combines the best characteristics of different frequency bands to boost capacities, unleashing the use of higher frequencies, like E-band, over longer distances and much wider geographical areas. Multi-band booster uses a low-band radio to provide a high-availability connection and combines it with a higher band that provides a significant increase in capacity, but with a slightly lower availability. This is perfect way to extend the reach of E-band up to 3 times.
