Abstracts

The global Multi-beam Mask Writer market size is expected to reach \$ 1026.2 million by 2029, rising at a market growth of 6.4% CAGR during the forecast period (2023-2029).

The key manufacturers of multi-beam mask writer in the world include IMS Nanofabrication and NuFlare Technology, of which IMS Nanofabrication holds more than 75% of the market share. The global production of multi-beam mask writers is mainly distributed in North America, Europe, Chinese Mainland, China Taiwan and South Korea, among them, Japan is the largest producer, occupied for a share of more than 30%. In terms of products, the current share of 7nm and above is more than 48%. In terms of application, Wafer manufacturers are the largest application providers, with a share of nearly 60%, followed by EUV mask manufacturers.

Mask writers are devices that use irradiation by electron beams to draw a fine electronic circuit pattern onto a template (the mask), which has been formed by a silica glass substrate with photosensitive resin.

Single-beam mask writers write data to the mask by concentrating the single electron beam on a single position over an electromagnetic field and then deflecting the beam to the position to be irradiated by the polarizer. Large circuit patterns can be created by repeating beam deflection and then moving the stage upon which the substrate is mounted.

Using thousands of tiny beamlets, multi-beam mask writers can pattern or write advanced masks at a faster rate compared to VSB-based tools. With chip miniaturization making device designs more complex and requiring the use of more masks, multibeam systems are coming into demand.

This report studies the global Multi-beam Mask Writer production, demand, key manufacturers, and key regions.
