Abstracts

According to our (Global Info Research) latest study, the global Multi-Box Milking Robot market size was valued at US\$ 1461 million in 2025 and is forecast to a readjusted size of US\$ 2674 million by 2032 with a CAGR of 9.0% during review period.

In 2025, global production of multi-box milking robots reached approximately 7.9 thousand units, based on an average market price of around US\$ 180,000 per unit. Industry gross profit margins generally ranged from 35% to 55%, reflecting value added from robotic control systems, animal recognition technology, and continuous-operation reliability. Global production capacity in 2025 was estimated at about 10.2 thousand units, indicating sufficient manufacturing capability to support adoption by medium- and large-scale dairy farms.

Multi-box milking robots are automated dairy systems designed to handle simultaneous or sequential milking operations across multiple milking stalls. They integrate robotic arms, sensors, and herd management software to enable voluntary milking, reduce labor dependence, and improve milking consistency and animal welfare.

The industrial chain includes upstream robotic arms, sensors, vision systems, pumps, and control electronics. The midstream focuses on system integration, software development, calibration, and testing. Downstream applications mainly involve commercial dairy farms, livestock cooperatives, and modern animal husbandry operations.
