## Abstracts

The global Multi-Box Milking Robot market size is expected to reach \$ 2674 million by 2032, rising at a market growth of 9.0% CAGR during the forecast period (2026-2032).

In 2025, global production of multi-box milking robots reached approximately 7.9 thousand units, based on an average market price of around US\$ 180,000 per unit. Industry gross profit margins generally ranged from 35% to 55%, reflecting value added from robotic control systems, animal recognition technology, and continuous-operation reliability. Global production capacity in 2025 was estimated at about 10.2 thousand units, indicating sufficient manufacturing capability to support adoption by medium- and large-scale dairy farms.

Multi-box milking robots are automated dairy systems designed to handle simultaneous or sequential milking operations across multiple milking stalls. They integrate robotic arms, sensors, and herd management software to enable voluntary milking, reduce labor dependence, and improve milking consistency and animal welfare.

The industrial chain includes upstream robotic arms, sensors, vision systems, pumps, and control electronics. The midstream focuses on system integration, software development, calibration, and testing. Downstream applications mainly involve commercial dairy farms, livestock cooperatives, and modern animal husbandry operations.
