A multi-cartridge filter housing is a device used in industrial and commercial applications to filter liquids or gases. It is designed to hold multiple filter cartridges, allowing for higher flow rates and increased filtration capacity compared to single-cartridge housings. Multi-cartridge filter housings are commonly used in industries such as water treatment, pharmaceuticals, food and beverage processing, chemicals, oil and gas, and many others where high-capacity filtration is needed. The number and type of cartridges installed in the housing depend on the desired filtration efficiency, flow rate, and the characteristics of the fluid or gas being filtered.
